

We were approached by Kevin Van Beek to try their new product By-O-Reg in our sow herd. We admit we were skeptical at first but we agreed to begin adding it to our gestation and lactation feed. We must say it began working just as he described. Within 2 months our wean to service interval was reduced by as much as 15%. The sows just started to come into heat better. My farrowing attendants also began noticing the sows farrowing faster with less stillborns and not having to assist as many sows. We have been adding By-O-Reg to feed for three months now with excellent results. We look forward to seeing additional benefits in the near future.

Kevin Van Beek 先生找到了我们，想在我们这试验他们的产品葆益多。说实话开始我们对这个产品抱着怀疑的态度，但我们还是同意在我们的怀孕母猪和哺乳母猪料里加入这个产品。必须要说我们很快就看到了 Van Beek 先生所描述的效果。饲喂葆益多不到两个月，断奶到再发情的间隔期就减少了 15%。母猪更容易进入发情期。照顾母猪生产的饲养员也发现吃了葆益多以后母猪的分娩时间也缩短了，而且减少了死胎数，此外难产几率也降低了。现在我们已经连续三个月在饲料中加入葆益多，目前的效果非常让我们满意。我们期待着在不远的将来看到更多的益处。
